

IN THE CLAIMS:

Please amend Claim 2 as follows.

1. (Previously Presented) A digital camera which can directly communicate with a printer, comprising:

a receiving unit that receives capability information of the printer from the printer;

a determination unit that determines, according to the received capability information, whether the printer has a function of automatically detecting a paper size; and

a user interface that notifies a user that the printer has the function if said determination unit determines that the printer has the function.

2. (Currently Amended) A digital camera which can directly communicate with a printer, comprising:

a receiving unit that receives capability information of the printer from the printer;

a determination unit that determines, according to the received capability information, whether the printer has a function of automatically detecting a paper ~~size~~ type; and

a user interface that notifies a user that the printer has the function if said determination unit determines that the printer has the function.

3. (Previously Presented) A digital camera which can directly communicate with a printer, comprising:

a receiving unit that receives capability information of the printer from the printer;

a determination unit that (a) determines, according to the received capability information, whether the printer has a first function of automatically detecting a paper size, and (b) determines, according to the received capability information, whether the printer has a second function of automatically detecting a paper type; and

a user interface that notifies a user that the printer has the first and second functions if said determination unit determines that the printer has the first and second functions.

4-12. (Canceled)

13. (Previously Presented) The digital camera according to claim 1, wherein said user interface inhibits a user from selecting a paper size if said determination unit determines that the printer has the function.

14. (Previously Presented) The digital camera according to claim 2, wherein said user interface inhibits a user from selecting a paper type if said determination unit determines that the printer has the function.

15. (Previously Presented) The digital camera according to claim 3, wherein said user interface inhibits a user from selecting a paper size if said determination unit determines that the printer has the first function.

16. (Previously Presented) The digital camera according to claim 3, wherein said user interface inhibits a user from selecting a paper type if said determination unit determines that the printer has the second function.

17. (Previously Presented) The digital camera according to claim 3, wherein said user interface (a) inhibits a user from selecting a paper size if said determination unit determines that the printer has the first function and (b) inhibits a user from selecting a paper type if said determination unit determines that the printer has the second function.
